

Are you confident that your networks are not currently compromised from a Cyber-Security attack? What would a serious cyber incident cost your organization? How would you respond to your clients or customers?

Many people have expressed an interest in these concerns and want to know what steps they, as professionals and business managers can take to protect their companies.

We provide a comprehensive two-hour RISK ASSESSMENT that addresses these concerns concerns and and more, starting with the basic question:

WHAT IS RISK ASSESSMENT?:

- Compare current policies against legal and other requirements to safeguard personal information
- Examine data flows
- Eliminate unnecessary information
- Address remaining gaps
- Take into account:
 - The firm's size, complexity, and capabilities
 - The firm's administrative, physical and technical infrastructure, including its hardware, and software security capabilities.
 - The costs of data privacy and security measures.
- Reasonableness standard
 - Team Approach – Divide and Conquer
 - Project Leader
 - Team Members
- By department – legal, financial, human resources, IT/IS, government relations, sales, public relations/marketing communications
- By location – facility, state, region, country
- By information classification – client, employee, patient/customer of client.
